

No Smell Asphalt FAQ

Today's society demands comfort. Anything that creates an uncomfortable situation is not tolerated for long. Let's face it; the odor produced from asphalt roofing is unpleasant to say the least. To substantiate this observation you only need to ask a child if he or she would like to be an asphalt roofer. I'll bet you a gentleman's wager they will respond with a resounding NO! When asked why? "It smells bad!" Right now you are probably asking, "What's the point? I know it smells bad." The point is: a product exists that virtually eliminates the odor from asphalt roofing. Yes, eliminates the odor! It completely removes the odor and replaces it with pleasant cherry aroma.

When the Roof-Odor Solutions additive is mixed with hot asphalt its active ingredients exhaust all the oxygen available in the mix. Without this process sulfur fumes cannot form, and sulfur is the number one cause of asphalt odor.

How do I know it works?

The Roof-Odor Solutions additive was tested at the National Center for Asphalt Technology (NCAT) and they confirmed that the product reduces asphalt fume emissions and eliminates odor. Additionally, the Construction Innovation Forum (CIF) for innovative ideas and new technology in the construction industry recently awarded the 2004 NOVA Award to Asphalt Solutions, Inc., the parent company of Roof-Odor Solutions. It has been proven that Roof-Odor Solutions when added to hot mix at the manufacturing plant in liquid form, becomes a hassle free alternative to the odor producing products available to the general roofing contractor.

About the Additive

Roof-Odor Solutions Additive virtually eliminates odors in all roofing asphalt applications. The benefits are limitless. Using Roof-Odor Solutions at the production level guarantees a hassle free, environmentally safe and economical roofing product. You benefit from low overhead, odor free production and positive community relations.

Roof-Odor Solutions Additive is an odor suppressant that acts at the molecular level as an oxygen scavenger significantly retarding the release of specific odor causing compounds directly responsible for the characteristics of asphalt odor. Encapsulating asphaltine, Roof-Odor Solutions Additive stops the evaporation of lighter petroleum molecules, eliminating fumes. Working at the molecular level, Roof-Odor Solutions Additive absolutely will not dissipate.

Developed as a simple odor reduction solution, Roof-Odor Solutions Additive attacks the odor-causing properties of asphalt used in roofing. Added to post-blown asphalt mix, Roof-Odor Solutions Additive targets specific odor producing chemicals and eliminates them. Designed to last, Roof-Odor Solutions Additive is the only answer to asphalt roofing odors.
